GENERAL STATEMENT

August 23, 2021 – October 12, 2021

Since our last public announcement the BID has been focused on developing and implementing the different projects.

Additionally, we made progress in several negotiations with governments, authorities, and organizations. YEM is now used by a stable coin as a collateral (USD1,000,000,000) to back their value. YEM is the reference currency for the global water wallet project. The German city of Roding (Bavaria) announced the first municipal foundation based on YEM.

Governments in Africa and South America are planning how YEM can be used as an official currency beside their fiat money. In 2022, a free trade zone shall be established with YEM as the reference currency for all financial transactions.

More and more corporations hold YEM as a capital reserve beside other assets, and several multi-million-dollar deals have been settled in YEM.

Our soon-to-be-launched YEMCONOMY campaign will not be limited to businesses. Governments, municipalities, and all kind of organizations will be able to apply for participation in our economic stimulus program.

While Bitcoin and other cryptos are continuing their rollercoaster ride, the stability of YEM is the key to success for our projects. Thus, compared to other currencies (fiat and crypto) the value of YEM is stronger than 6 weeks ago. Therefore, the official trading range for YEM has been adjusted to USD9.50 - USD10.50 with a first trade at USD10.00.

We will continue to protect and grow YEM, turning your everyday money into the world's everyday money.
